Fourth session

(1) Find an object detection dataset

https://docs.ultralytics.com/models/#featured-models

(2) Select a model from Ultralytics framework

- **YOLOv8**: A versatile model featuring enhanced capabilities such as instance segmentation, pose/keypoints estimation, and classification.
- **YOLOv9**: An experimental model trained on the Ultralytics YOLOv5 codebase implementing Programmable Gradient Information (PGI).
- **YOLOv10**: By Tsinghua University, featuring NMS-free training and efficiency-accuracy driven architecture, delivering state-of-the-art performance and latency.
- **YOLO11**: Ultralytics' YOLO models delivering high performance across multiple tasks including detection, segmentation, pose estimation, tracking, and classification.
- **YOLO26** 🚀 NEW: Ultralytics' latest next-generation YOLO model optimized for edge deployment with end-to-end NMS-free inference.
- **Real-Time Detection Transformers (RT-DETR)**: Baidu's PaddlePaddle real-time Detection Transformer (RT-DETR) models.

Fourth session

(1) Find an object detection dataset

(2) Select a model from Ultralytics framework

(3) Use our notebook as a reference to train a model
